

We are asking for less than places like us already have.

Comparable communities under concentrated flight paths have won real, named mitigation. Brockenhurst, a village of the same size under a National Park, has none. This is not a request for anything novel.

Airport	Village (population)	Arrivals / yr	Protected landscape	Mitigation secured
Bournemouth	Brockenhurst (3,488)	12,574	New Forest National Park	None
Farnborough	Chiddingfold (2,960)	14,460	Surrey Hills AONB / South Downs NP	Formal CAA post-implementation review after the 2020 airspace change.
Gatwick	Newdigate (1,749)	132,718	Rural Surrey	Independent Arrivals Review (23 recommendations, all accepted); a standing Noise Management Board; raised continuous-descent height; noise insulation grants up to £4,300.
Southampton	Nearby villages	18,265	—	Night movements capped at 10 a month via a Section 106 planning agreement.

What makes Brockenhurst different is concentration, not raw numbers. Our own track data for the busiest month (July 2025) shows a far higher share of Bournemouth's arrivals route directly over Brockenhurst (about 76%) than reach any comparator village. Where Gatwick and Farnborough spread their traffic across many communities, Bournemouth funnels almost its entire arrival stream over one National Park village, 9.7 miles out.

- THE MITIGATION MENU OTHERS HAVE WON, AND BOURNEMOUTH LACKS**
- **An independent arrivals review** — Gatwick's led to 23 recommendations, all accepted by the airport.
 - **A standing Noise Management Board** with an independent chair and community seats.
 - **A raised continuous-descent height** — keeping aircraft higher over communities, exactly our ask.
 - **Noise insulation grants** — up to £4,300 at Gatwick, around £3,000 at Heathrow.
 - **Night limits through planning** — Southampton caps night flights at 10 a month via Section 106.

Airport volumes: arrival counts from our Europe-wide dataset (OPDI / OpenSky), 2025, close to published movement figures. Overflight share measured from the same track data (busiest month). Populations: 2011 and 2021 censuses. Mitigation: each airport's published noise material.
