

Where this stands, who we need to move, and what we do next

The meeting with Russell changed the picture. The airport is sympathetic but says it can change nothing for years, because Bournemouth's flight-path work has been absorbed into the national UKADS redesign. This pack sets out the timeline, the people who hold the levers, and a plan built around near-term pressure while the long process runs.

DELIVERABLE 1

What is happening, and when

DELIVERABLE 2

Who we need to influence, and why

Placed by how much **power** they have over the outcome (up) and how **aligned** they already are with us (right). Arrows show who can pressure whom. The job is to move the powerful players rightward, and to use our allies and the levers that reach the operator.

The players, their lever, and our ask

Who	What they control	What we want, and how
BCP Council Lever	The Section 106 (2007), the Noise Action Plan and planning enforcement. Defines the night window.	Review and tighten the S106, especially night operations, as Southampton did. A structured complaint to the planning authority is our strongest near-term lever. Lead: Avery.
Bournemouth Airport / Nicole Target	Day-to-day operations, noise-abatement procedures, how complaints are handled, the design proposals.	Interim CDA and night procedures now; press the "no freeze on accountability" case. Keep Nicole onside but make inaction uncomfortable. Lead: Guy / John.
Solent / Swanwick ATC Target	The airspace into Brockenhurst until handover to the airport near 10 NM, which currently forces the level-off that kills the continuous descent.	Renegotiate the handover Letter of Agreement for a "free-flow" continuous descent, at least in quiet night hours. Route via BOH and CAA.
CAA Process	The CAP 1616 airspace process and oversight of UKADS. Can permit minor / temporary changes.	Register concerns early; ask about a minor / interim ACP for local night relief. Be a known, credible voice before the consultation.
UKADS / NATS Process	The single London-area redesign that will set Bournemouth's future routes.	Ensure the design routes away from Brockenhurst and does not hard-wire a GPS "noise highway". Track the portal; feed evidence in.
Parish Cllr Russell / PC Ally	Formal standing, the ear of the airport, a seat at the table. Holds the key Stage 2 document.	Our "good cop". Get the ACP-2019-043 Stage 2 document, a presentment slot, and PC backing for a seat on the consultative committee.
Airport Consultative Cttee Gateway	Early sight of airport information and a formal channel to raise concerns.	Secure a BCAG seat urgently. Meeting 23 July. This is how we stop being on the outside.
New Forest NPA Ally	A statutory tranquillity and conservation duty over the National Park.	Enlist as an ally against low flights over a protected landscape. Feed them our data.
MPs · HCC · NFDC Ally	Political weight and letters that authorities must answer.	Brief them with the evidence; ask them to write to the airport, BCP and the CAA.
Media · other villages Ally	Public attention and the "increasingly irritating problem" pressure the airport wants to avoid.	Coordinate with neighbouring communities; use local press when timing suits, without diluting the flight-path campaign.

Read across the table: the process players (CAA, UKADS, NATS) decide the long-term routes but move slowly. The fastest wins run through BCP's planning powers and the ATC handover. Our allies (Russell, NPA, MPs, media) exist to make the powerful players act, and our own weight comes from complaint volume and credible data.

DELIVERABLE 3

The plan: what we do, and when

Two campaigns, run in parallel, kept distinct. A) The flight paths, height and continuous descent, our current track, aimed at CAA / UKADS / the airport. B) Night operations and the Section 106, led by Avery through BCP planning. They support each other but must not dilute each other.

Owners shown in gold are suggestions to start the conversation, not fixed assignments.

1 Now

next 4 weeks

- **Get a seat on the Airport Consultative Committee.** Meeting 23 July. Use Russell and the PC to back the request. **John · Russell**
- **Parish Council presentment.** Inform them of the BCP complaint (courtesy) and share the leaflet. **Avery · John**
- **Hold leaflet distribution** until the wording is updated for the new timeline (Russell flagged it as premature). **Michael**
- **Get the ACP-2019-043 Stage 2 document** from Russell and compare it against the design envelopes we already mapped. **Avery · Michael**
- **Keep complaints flowing.** Volume is the pressure. Make it easy (the short QR email). **All**
- **Next BCAG meeting:** agree this 6-month plan, confirm roles, and decide whether BCAG needs a formal structure. **All**

2 Short term

to end 2026

- **Push the interim levers.** Renegotiate the Solent handover; interim night CDA directive; explore a minor / temporary ACP. Frame: "no 10-year freeze on accountability". **Guy · John**
- **Open the BCP / Section 106 front.** Formal planning complaint; press for an S106 review of night operations; chase the FOI monitoring reports. **Avery**
- **Stand up noise monitoring.** Calibrated sound logging tied to flight tracks, building toward a regular report. Include departures on easterly ops. **Michael · Sue**
- **Widen engagement.** Village-wide education beyond WhatsApp (answer the poll-representativeness point); reach neighbouring villages, NPA and MPs. **John · Steve**
- **Watch the GPS route change.** Make sure the move to satellite routes is not used to fix a noise highway over the village ahead of the wider review. **Guy · Michael**

3 Medium term

2027 to the ~2028 consultation

- **Build the evidence base** so the collective-breach argument bites: multi-year track and noise data, not single flights. **Michael**
- **Be consultation-ready.** Register for CAA / UKADS portal alerts now; prepare BCAG's formal response for the CAP 1616 "Consult" stage. **All**
- **Hold the coalition.** Keep the ACC seat, PC, NPA, MPs and media warm and informed. **John**

4 Long term

2028 to 2035

- **Shape the final design** so approved routes avoid Brockenhurst, and lock night protections into the S106. **All**
- **Bank and defend interim wins** (handover, night CDA) so relief arrives long before 2035. **All**

Guiding principles: stay evidence-led and accurate; we are not against the airport or its reasonable growth; do not push the noise onto other communities; keep Russell as the measured voice; and keep the two campaigns coordinated but distinct.

Ideas not yet on the table

New angles beyond what the group has already discussed, each with a suggested owner to get it moving. All are for discussion, not decisions.

1 Use the Environmental Information Regulations, not just FOI

Environmental information is harder for a public body to withhold than an ordinary FOI. Use it to force out the Solent–airport handover Letter of Agreement, the airport's Noise and Track Keeping (NTK) radar logs for named flights, and its CDA compliance figures, which it does not publish.

Suggested: Avery + Sue

2 Attack the redesign's "baseline"

The CAA has already told the airport its baseline scenario was weak. Get our independent data recognised as the true baseline, so a future claim of "no significant change" cannot be measured against a flattering starting point.

Suggested: Michael + Guy

3 Get a protective "Design Principle" adopted

The CAP 1616 process lets communities shape the principles the new design must meet. Push for one that protects the National Park, for example no routine overflight of Brockenhurst or the NFP below a set height. Avery has already found the Design Principles material.

Suggested: Avery + Russell

4 Lobby the airlines directly

The airlines, not only the airport, choose how they descend. Use their own environmental pledges and the airport's own line that it "engages airline safety teams" to send each carrier a data-backed note on its worst Brockenhurst flights.

Suggested: Steve + Michael

5 Runway-08 complaint alerts

Auto-detect from the flight data when the airport switches to easterly operations and ping the group, so complaints land in coordinated bursts on the worst days instead of trickling in one at a time.

Suggested: Michael

6 Frame it as public health

World Health Organisation guidance puts recommended night-noise limits well below what residents are getting. Brief the council and Hampshire public-health teams and local GPs, and lean on the council's public-health duty, not just planning.

Suggested: Sue

7 Build a cross-parish alliance

One village is easy to dismiss; a bloc is not. Federate with Sway, Burley and other affected communities plus the National Park Authority, and present to UKADS as a single voice, without diluting our own asks.

Suggested: John

8 Get a preliminary legal opinion, crowdfunded

As Luton's group did, a short opinion on whether the airport is meeting its Section 106 "all reasonable endeavours" duty would sharpen every ask and could be crowdfunded across the affected villages.

Suggested: Dave + Avery

Also worth exploring: engage the airport's corporate owner and its published sustainability goals, above the operations team (owner to be confirmed); pursue a Deed of Variation to the Section 106 to create a Brockenhurst-claimable community noise fund and a penalty for low or off-course flights (as at some other airports); and publish a simple live "flights and complaints" dashboard on the website to keep momentum visible and give the press a hook.
